

Solar Powered Mobile CCTV Trailers

- 360° Camera View**
(Independent Day & Night Lenses)
- 360° PIR Detection**
(Up to 60m Diameter)
- 360° Flood Lighting**
(Auto Activation On Detection)
- Audible Siren & Strobe**
(Auto Activation On Detection)
- 30 Days Recording**
(Motion & Frame Rate Dependent)
- LAN, 3G & WiFi**
Remote Viewing Access

UniFi's Mobile CCTV Surveillance Trailers are a tested product introduced to the market in 2010. The Trailers can both compliment and replace, traditional static security guards, mobile patrols and fixed CCTV camera systems.

The units are independent Mobile CCTV Stations that are capable of recording and transmitting live video images across 3G networks. Each Trailer has its own internal Network Video Recorder which can be remotely and securely accessed from any computer or mobile compatible device with internet connection from around the world.

One of the significant differences between the UniFi Trailers and others in the market is there true autonomous use of 100% solar powered technology. These CCTV Trailers are self sufficient in operation for months on end, without human interaction, without mains powered connection and without the use of diesel fueled generators.

Up to the second live footage and historical event recording can be remotely viewed through the software platform which is designed for multi users. Combined with the PIR motion detection systems the Trailier can be programmed to send alarm signalling messages to security control rooms, network centres, PC's or hand held mobile devices.

The intelligent PIR detection system can also be programmed to activate flood lighting, audible sirens and strobes and control PTZ camera positioning to the area of detection.
